USER GUIDE AND SETUP

ArthurLegal

An AI assistant for lawyers, tied to official sources

It installs into Claude Desktop and opens inside Claude as one panel: **ArthurLegal Masası**, the desk. It researches, drafts petitions and contracts, and checks sources and deadlines; it masks client documents **on your computer**. The lawyer always has the final say.

Windows · macOS | Official sources, no fabricated citations | ArthurMask: local privacy | Turkish · multi-jurisdiction | No API key

4 packages + 3 tools
Law Firm, Corporate Assistant, Courthouse, Academician; ArthurLegal Tapu, ArthurMask and ArthurLegal Memory

132 tools
On one research connector: 12 legal systems, 3 global sources, fee cards and the desk; Türkiye deepest

19,627
Turkish regulators' decisions and bulletins, in a local archive searchable by meaning

DOWNLOAD · ALWAYS THE LATEST

github.com/beerbottle90/ArthurLegal#download

Windows 10/11 (64-bit) · macOS 11+ (Apple Silicon and Intel) · no administrator password needed

1 · DOWNLOAD

One setup file

An .exe for Windows, a .pkg for Mac; the link always gives the latest version.

2 · INSTALL

Choose modules and interface

Tick your package and, if you like, Tapu, ArthurMask and Memory; the ArthurLegal new interface comes selected.

3 · OPEN

Open the desk

Click the ArthurLegal icon and press Enter; the desk opens inside Claude.

Design: Ertuğ Demir
ArthurLegal · a ban on drudgery for everyone in law

ArthurLegal is not legal advice and makes no decisions. Every output is a draft; the lawyer who uses it reviews it.

01 · BASICS

What is ArthurLegal?

A legal assistant package that runs on Anthropic's Claude model. Setup connects your package's instructions and knowledge files to **Claude Desktop**, together with the research connector to official sources; the desktop icon opens it inside Claude as one panel. The assistant answers every legal question by these rules: it shows its source and never presents what it could not retrieve as fact.

Who is it for?

Law Firm

Lawyers and firms: litigation and petitions, contracts, criminal defence, tax, administrative and employment law, KVKK, intellectual property, energy, expert reports, client intake and conflict checks.

16 practice areas · 7 automation agents

Corporate Assistant

In-house legal teams: contract review, compliance, KVKK, company law, regulatory tracking, sanctions screening, go-live review of AI agents.

12 practice areas · 7 automation agents

Courthouse

Judges and court clerks: preliminary examination, preparatory order, writs, service, skeleton of a reasoned judgment, appeal routes and time limits. Neutral; it proposes no outcome.

12 plugins · 56 skills · 10 court types

Academician

Legal academics: research design, citation checks and bibliography, article writing, thesis supervision, peer review, grant applications, academic promotion, publication ethics.

8 plugins · hidden instructions in a document being read are not followed

> “This was the dream of a lawyer who spent 42 years in solo practice in the provinces. Our starting point: **a ban on drudgery for everyone in law.**
>
> The story of ArthurLegal

What it is not

- It is not legal advice; it makes no decisions.
- It pseudonymises, it does not anonymise: KVKK and confidentiality duties still apply.
- Depth differs by country; when coverage narrows, the answer says so.
- It needs the internet; only ArthurMask works offline.

Five principles

1 Official sources, no fabricated citations

Before an article of a law is written, it is fetched from the official text and compared with its heading (**article verification gate**). A Turkish court decision's citation (chamber, case no., decision no., date) is written only if a tool found it in the same chat (**case citation gate**).

2 It says what it does not know

If information cannot be retrieved the proper way, the answer says so plainly (“WARNING: data could not be retrieved, please verify”). The link is the address the tool gave or the source's official entry page; it is never guessed.

```
UYARI: veri çekilemedi, teyidiniz gerekli: https://www.mevzuat.gov.tr/
```

3 Client data stays on the computer

Documents are masked in ArthurMask first; Claude sees only the labelled text. No client name or confidential information goes into research queries.

4 It drafts; the lawyer decides

Every output is a draft. Draft petitions, contracts and judgments go through the approval of the lawyer, the judge or the panel; nothing goes straight to a court or a client.

5 Open source, improving with each release

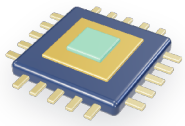

The source code is open on GitHub for anyone to read. What changed in each release is stated plainly in the release notes.

Licence

Open source, non-commercial use. Use by lawyers and law firms (client work included) is permitted; use by in-house lawyers and personal use are not considered commercial either. Commercial means selling the software itself, redistributing it or offering it as a service; these require written permission; the binding text is the LICENSE file in the repository. The packages are derived from Anthropic's claude-for-legal knowledge base (Apache 2.0).

02 · FUNCTION

How does it work?

You do not need to set up a project or paste instructions. You start with a task on ArthurLegal Masası (the desk) or describe the work in the chat; the assistant first loads the ArthurLegal instructions, then goes to the source and returns the draft with its sources.

1	2	3	4	5	6
Question or document	**ArthurMask**	**Claude + ArthurLegal**	**Official sources**	**Sourced draft**	**Lawyer's approval**
Start from the desk or type in the chat. Drop client documents into ArthurMask first.	On your computer, names, numbers and addresses become labels.	Package instructions, guides and skills split the work into steps.	ArthurLegal MCP: Türkiye's case law, legislation and regulators' decisions; plus 10 countries and the EU.	Every item comes with source and date; what could not be retrieved, with a UYARI (warning) line.	Real names are written back on the computer; tracked changes in Word or UDF.
ON YOUR COMPUTER	ON YOUR COMPUTER	CLAUDE MODEL	RESEARCH ENDPOINT	CLAUDE MODEL	ON YOUR COMPUTER

Modules

MODULE	FOR WHOM	WHAT IT DOES	DESKTOP ICON
Law Firm	Lawyers and firms	Petitions, contracts, case law and legislation research, deadline tracking	ArthurLegal
Corporate Assistant	In-house legal teams	Contract review, compliance, KVKK and company law	ArthurLegal
Courthouse	Judges and court clerks	Neutral drafts: skeleton of reasoning, orders, writs, service; 7 reminder watchers	ArthurLegal - Courthouse
Academician	Legal academics	Literature, citation checks, journal choice, publication ethics	ArthurLegal - Academician
ArthurLegal Tapu	Land registry and cadastre work	Live parcel data by block/parcel or place name, sketch and fees	ArthurLegal - Tapu
ArthurMask	Anyone working with documents	Masks the document on the computer before Claude sees it	ArthurMask
ArthurLegal Memory	Everyone, optional	Keeps preferences, corrections and the last session across chats, on this computer	Start menu: Memory Folder

What do you type in the chat?

Describing the work in a plain sentence is enough; the assistant picks the right skill itself. To see all the commands of a plugin, type its name: `/litigation-legal:`

PLAIN WORDS · LAW FIRM

"Find recent Yargıtay decisions on determining rent, with their case citations."

Case law is searched; each decision comes with chamber, case no., decision no. and date; a citation that cannot be found is not written.

LAW FIRM

`/firm-operations:new-client-intake`

Client intake chain: conflict check, anti-money-laundering screening, privacy notice, fee and power of attorney.

CORPORATE ASSISTANT

`/regulatory-legal:ai-ajan-onayi`

Before an AI agent goes live: five levels of autonomy, six minimum conditions, a four-way decision.

COURTHOUSE

`/hukuk-hakim:on-inceleme`

Draft preliminary examination; every output carries the heading "draft" and goes through the approval of the judge or the panel.

ARTHURLEGAL MEMORY

"Remember this: in petitions, put citations in footnotes."

The preference is written to the memory folder on your computer, and later chats know it too. If you say "do not write to memory", nothing is written in that chat.

ARTHURLEGAL TAPU

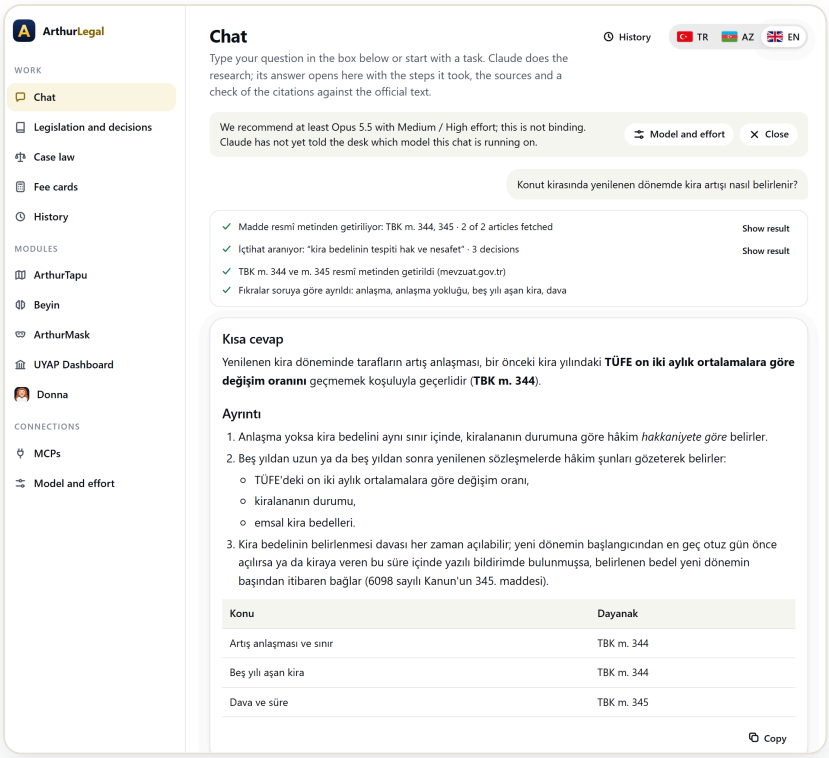

"İstanbul Kadıköy Caferağa 123 ada 45 parsel"

The parcel comes live from TKGM Parsel Sorgu: report, scaled sketch, map and fees.

03 · DESK

ArthurLegal Masası, the desk

All modules in one panel, **inside Claude**. The desk runs on your own Claude plan; no API key or separate app. You type your question in Claude's message box below: it reaches the desk at once, every source Claude looks at appears as a line, and the answer is written on the desk.

How do you open it?

1 Click the icon
The **ArthurLegal** icon on the desktop opens Claude Desktop with the message "ArthurLegal Masası'nı aç" (open the ArthurLegal desk) already typed.

2 Press Enter
Important: the message is not sent by itself; press Enter and the desk opens full screen. This one key press is Claude's security rule.

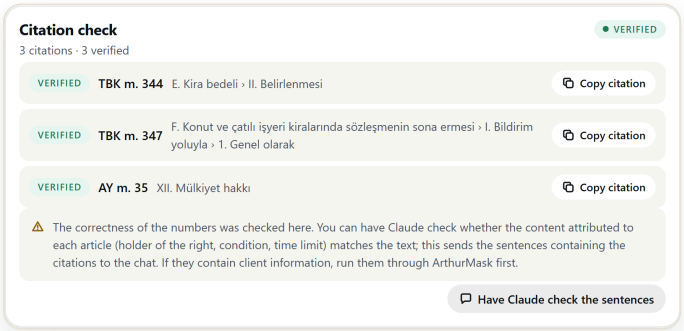

3 Type your question
Type in the box below or pick a card. The question appears on the desk's **Chat** screen; every source consulted (what was searched, how many results) is a live line. The answer opens in the same place with its sources and citation check.

Interface choice in setup

- (●) **ArthurLegal new interface** — The desk and in-chat cards. Selected by default.
- ( ) **Claude Desktop classic** — Desk and cards off; results come as text.

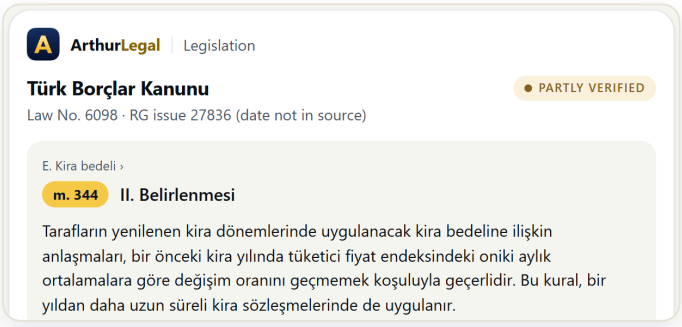

Check a draft's citations in one go

Paste the text of a petition or contract: article citations (`TBK m. 344`, `6098 sayılı … 344. maddesi`, `Anayasa m. 35`) are found and checked against the official text. Only law and article numbers go to the server; your text stays on the screen.

ArthurLegal cards in the chat

Without the desk open, article and case-law results come as cards in the chat (with the desk open, under the step): heading with parent headings, text, a citation to copy, a link to the official text and a verified badge. A missing article gets a UYARI (warning) line.

Donna

With the apps you connected to Claude (email, calendar, Slack, tasks) it summarises your day and sets reminders. It asks before creating or sending anything; it does not calculate legal time limits.

One panel, every module

Legislation and citations, case law, fee cards (p. 5), ArthurTapu, Beyin (Memory), ArthurMask, UYAP Dashboard. Modules running on the computer open from a button on the desk. The **MCPs** screen shows your connected servers and their statuses.

On the web and on the phone

Once you add the research connector to claude.ai (p. 8), the desk and cards also open on the web and in Claude's phone app. Memory, ArthurMask and UYAP stay on your computer by design.

The desk in three languages

The desk speaks **Turkish, Azerbaijani and English**: on first opening it starts in the language Claude reports; switch with the flags at the top right (TR · AZ · EN). The computer remembers the choice; on the web and phone it lasts for that chat. Legislation, decisions and Claude's answers stay untranslated.

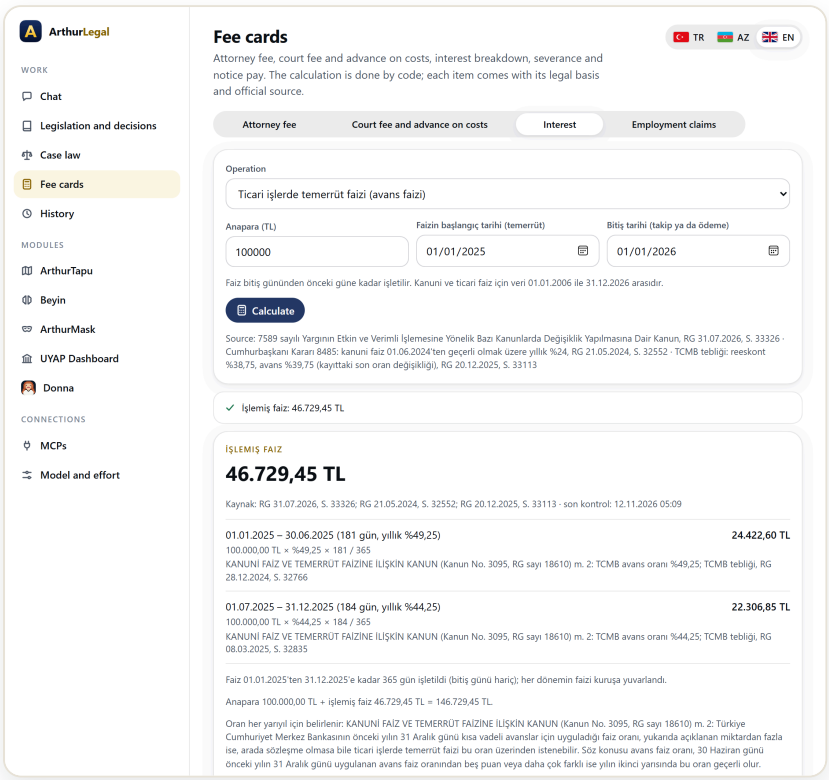

Model and effort

We recommend at least Opus 5.5 with Medium / High effort; this is not binding. In ArthurLegal's own test with hard questions, smaller models made more critical errors on deadlines, procedure and recently amended law; no model wrote a fabricated citation. Claude remembers your last model choice, so once is enough; ArthurLegal works with every model. On the desk: the **Model and effort** screen and an indicator at the bottom left.

04 · FEES

Fee cards

Attorney fee, court fees, interest, severance and notice pay. **Code does the calculation, not AI**: on the desk you pick the operation and fill in only the boxes it asks for; the result comes with the legal basis and official source of every item. Ask Claude the same question and it calls the same tool instead of working out the amount itself.

How do you use them?

1 Choose the card and the operation
The **Fee cards** screen on the left of the desk has four cards, each with a list of operations: on the Interest card, for example, statutory interest, commercial default interest or a contractual fixed rate.

2 Fill in only the boxes needed
Only the boxes your operation needs open: principal and dates, amount in dispute, start and end of employment. You write no code or formula.

3 Read the result with its basis
The total is written large; each line shows the step, the article and the Resmî Gazete citation. Open points are set apart under **Teyit edin** (verify). **Copy** takes the breakdown with its notes.

How fresh is the data?

A daily watcher scans the Resmî Gazete; every result shows its source and last check time. If a new tariff, rate or fee rule has appeared, or the day's check failed, the card **gives no definitive total** and warns with a link.

Four cards

Attorney fee

The statutory minimum attorney fee: a fixed or proportional fee by the type and value of the work, under the rules of the tariff.

Avukatlık Asgari Ücret Tarifesi 2026 · RG 03.11.2026, S. 33419

Court fee and advance on costs

The court fee items and the advance on costs payable when a case is filed.

Harçlar Kanunu Genel Tebliği (Seri No: 98) · RG 31.12.2025, S. 33124 (5. mükerrer) · HMK Gider Avansı Tarifesi · RG 28.10.2025, S. 33061

Interest

Statutory interest, default interest in commercial matters or a fixed rate; period by period, by day count, simple interest. Data 2006–2026.

3095 sayılı Kanun m. 1, 2, 3 · rates from the TCMB communiqués in the Resmî Gazete

Employment claims

Severance and notice pay, gross preliminary calculation; severance is capped at the ceiling on the termination date.

1475 sayılı Kanun m. 14 · 4857 sayılı Kanun m. 17 · ceiling: ÇSGB table

Employment claims: sample result

Severance and notice pay on separate lines, with step and article. The figures are fictional; the ceiling comes from that day's data.

Limits

- **It is a preliminary calculation.** You check the result against the facts of the file; the card gives no legal opinion.
- **Employment claims are gross.** Net amounts and entitlement conditions (e.g. the ground for termination) are not considered.
- **For interest**, partial payments are not considered; the card does not check whether the matter is commercial.
- **The severance ceiling** is not published in the Resmî Gazete; it comes from the Ministry of Labour and Social Security table.
- **Year end.** After 31.12.2026 the interest and employment cards give no definitive total until the new rate and ceiling are entered.

05 · FUNCTION

Privacy, land registry and coverage

ArthurMask: documents are masked before they leave the computer

You drop the document into ArthurMask's local interface. Names of people and companies, TCKN/VKN (ID and tax numbers), IBAN, address, phone, email and case numbers become labels; a person keeps the same label in every document of a file. Real values stay in the file's encrypted vault.

ON YOUR COMPUTER (REAL)

`Davacı Ali Veli (TCKN 123•••••••0), davalı Örnek Gıda A.Ş. aleyhine 2026/145 E. sayılı dosyada…`

→

WHAT CLAUDE SEES

`Davacı {{KİŞİ-01}} (TCKN {{TCKN-01}}), davalı {{ŞİRKET-01}} aleyhine {{DOSYA_NO-01}} sayılı dosyada…`

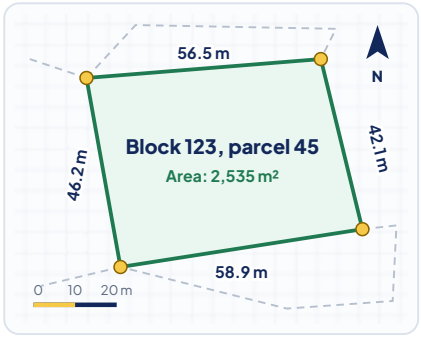

Mask	Review	Red line	Exit gate	Unmask	Audit
Word, UYAP UDF, PDF, scans and photos (local OCR)	The lawyer decides on uncertain detections	Defence strategy, settlement limits, special-category data never go out without a reason	Every outgoing reply is scanned again against the real values in the vault	The answer returns with real names; revisions become tracked changes	A log of what was sent and a one-click leak check

Fully offline: recognition and OCR models come with setup. Dates and amounts (for time limits) and high-court citations are deliberately left open; handwriting, signatures, seals and QR codes are not masked. It is pseudonymisation, not anonymisation; detection is probabilistic, so read the masked output before sending. Claude Desktop only (Mac: Apple Silicon, macOS 14+). The example is fictional.

ArthurLegal Tapu: the parcel in the chat

- By province, district, neighbourhood and block/parcel, by coordinates or by place name, the parcel comes live from the public data of **TKGM Parsel Sorgu**.
- Parcel report, area and side lengths, scaled A4 sketch, map; DXF, KML and CSV export. Coordinates arrive rounded to about 1.1 m, so the area uncertainty is stated.
- The 2026 land-registry fee and revolving-fund tariff (every figure quoted from its source) and the legislation and case law to consult for the dispute.
- Measured use: at most 30 requests a minute for all users, one queue; it backs off under load and refuses bulk scans. A consent card appears once, on the first live query.
- No owner, annotation or mortgage data; for information only. A land-registry record's text is processed only in the Tapu tool on your computer.

The sample sketch and measurements are fictional

Coverage: 28 jurisdictions, four depths

Türkiye — deepest

- TR Yargıtay, Danıştay, BAM, first-instance courts, KYB
- TR Anayasa Mahkemesi and Uyuşmazlık Mahkemesi
- TR 12 types of legislation, article tree, explanatory notes
- TR Resmî Gazete

8 regulators in one interface: **Rekabet, EPDK, SPK, BDDK, KVKK, BTK, GİB, Sigorta Tahkim**. Search by meaning across 19,627 documents also finds decisions that use different words.

Primary sources — on one connector

NL Netherlands · PL Poland · AT Austria · IE Ireland · FI Finland · ES Spain · UK United Kingdom · EU EU and CJEU · JP Japan · AZ Azerbaijan · DE Germany · LEI GLEIF company identity · DOC Doctrine, incl. 19 Turkish law journals · CON 5,125 signed contracts, 107 countries

Optional — with an extra connector

CH Switzerland: OpenCaseLaw.ch, Fedlex · US US case law: CourtListener

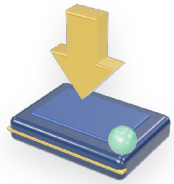

By guide — official portals

FR France · IT Italy · RU Russia · CN China · RS Serbia · AE UAE · CZ Czechia · GE Georgia · IL Israel · KZ·UZ Central Asia · RO Romania · UA Ukraine · GR Greece · ECtHR European human rights

"No results" and "could not search" are different answers: the `status` tool shows which source is loaded and which years are indexed.

06 · SETUP

Setup in four steps

One setup file connects the packages, the tools and the research connector to Claude Desktop. Later versions arrive by themselves in the background; you do not need to download the file again. Download: **github.com/beerbottle90/ArthurLegal#download**

Operating system
Windows 10/11 (64-bit) or macOS 11+ (Apple Silicon, Intel)

Claude
A Claude account and Claude Desktop (your own plan, no API key); on Windows, setup tries to install it if missing

Connection
Internet; no administrator password needed

ArthurMask
~4 GB free disk, 8 GB memory recommended; on a Mac, Apple Silicon and macOS 14+

Language
Setup in Turkish, English and Azerbaijani (asked at start on Windows, follows the system language on a Mac); Claude Desktop menus in English

Windows

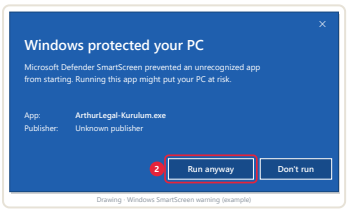

ArthurLegal-Kurulum.exe

1 Download

Click the Windows button on the page. If Edge says the file "isn't commonly downloaded": ··· → **Keep**, then the arrow next to the blue **Delete** → **Keep anyway**. In Chrome: **Download suspicious file**.

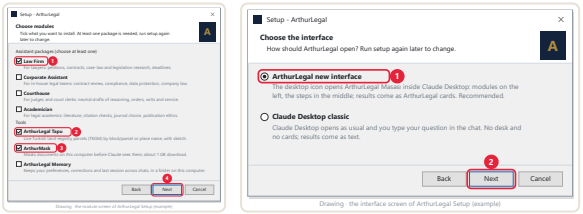

2 Double-click

In the blue "Windows protected your PC" window: **More info** → **Run anyway**. Do not press Enter: Enter selects "Don't run".

3 Choose modules and interface

Language: English → **I accept the agreement** → **Next**. Choose at least one package; if you tick ArthurMask with Law Firm or Corporate, the **UYAP Dashboard** comes too. On the next screen the **ArthurLegal new interface** comes selected; or choose **Claude Desktop classic**.

4 Install

Click **Install**. If Claude Desktop is open it is closed; send your message first. ArthurMask downloads ~1 GB (click **Stop download** and it downloads later in the background). **Finish**: Claude Desktop opens with "ArthurLegal Masası'nı aç" typed; as the bold reminder on the last screen says, **press Enter**.

Mac

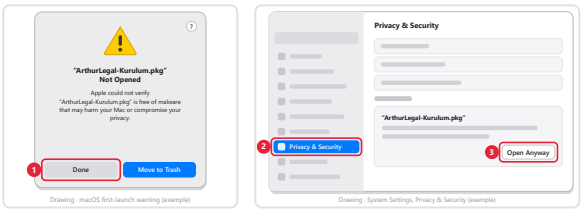

ArthurLegal-Kurulum.pkg

1 Download

Click the Mac button on the page: one file for Apple Silicon and Intel, saved to the Downloads folder.

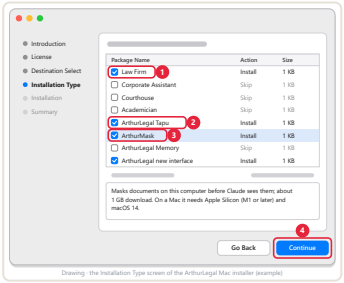

2 Allow the first opening

In the "Not Opened" window click **Done**, not the blue **Move to Trash**, and do not press Enter. **System Settings → Privacy & Security** → **Open Anyway** → password → **Open Anyway** again. Only once, on the first opening.

3 Choose modules

Continue → **Agree** → tick the modules on the **Installation Type** screen → **Continue**. The **ArthurLegal new interface** box comes ticked; untick it for classic.

4 Install

Install → **Close**. If Claude Desktop is open, quit with Cmd+Q and reopen it, then ArthurLegal icon → Enter. ArthurMask downloads in the background (~1.2 GB); a notification tells you when it is ready.

First opening

Click the ArthurLegal icon; Claude opens with the message typed: **press Enter**, it is not sent by itself. If Claude asks permission the first time it uses a tool, choose **Always allow**. With the classic interface, open a new chat and ask.

If "Run anyway" does not appear

Smart App Control is on in Windows 11. Download **ArthurLegal-Kurulum.zip**: right-click → Properties → **Unblock** → Extract All → double-click **KUR** and type the module numbers (e.g. `1,5`). ArthurMask is not installed this way.

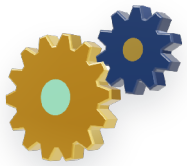

Afterwards

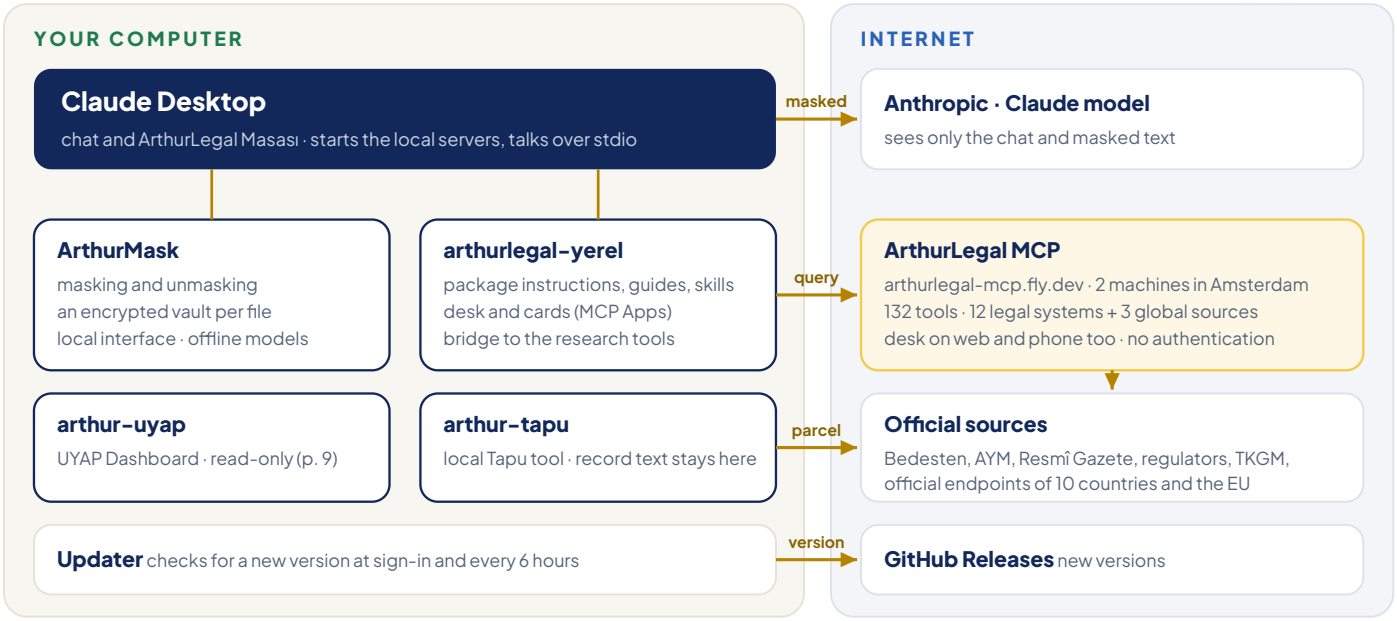

To add or remove modules or change the interface, run setup again; your last choice comes ticked. Uninstall: Settings → Apps → ArthurLegal (Mac: **Uninstall ArthurLegal**); your own files stay. Silent install for IT: `/VERYSILENT /MODULLER=adliye,tapu /ARAYUZ=yeni`

07 · TECHNICAL

What is behind it?

Setup brings its own Python and registers local servers with Claude Desktop. Only search queries, masked text and update checks go out to the internet.

What leaves the computer?

Package files, firm profile, land-registry record	**Never leave.**
Citation check	Only law and article numbers; the text stays on the desk.
A document that went through ArthurMask	Only its labelled form goes to Claude; real values stay in the vault.
Research query	To ArthurLegal MCP and the official source; for search by meaning, to the embedding provider (Voyage AI). No client name goes into a query.
Updater	Connects only to GitHub; no query or document is written to the logs.

Using the research endpoint directly

It works in any MCP client without installing a package; there is no authentication. Call the `status` tool first. In Claude, results come as cards; "ArthurLegal Masası'nı aç" opens the desk. The endpoint is provided as is, with no uptime guarantee.

```
URL https://arthurlegal-mcp.fly.dev/mcp
Claude Settings → Connectors → Add custom connector
Claude Code
claude mcp add --transport http \
  arthurlegal https://arthurlegal-mcp.fly.dev/mcp
```

Türkiye and five countries (NL, PL, IE, FI, ES) are searched from a local index; the others are queried live at the official source and re-ranked. The hybrid search rule comes from a 120-question measurement.

Technical specifications

SETUP
Its own Python comes with setup · Windows: Inno Setup, per-user · macOS: one .pkg, Apple Silicon and Intel

RESEARCH ENDPOINT
MCP, Streamable HTTP · 2 machines on Fly.io · SQLite FTS5 + vectors (voyage-4-lite, 1024 dimensions) · Frankfurt relay for Azerbaijan

INTERFACE
MCP Apps (ui:// views) · inside Claude, on the user's plan · desk and cards from one source, light and dark theme

ARTHURMASK
Presidio + rule recognisers specific to Turkish law + GLiNER · local OCR (RapidOCR) · vault: Scrypt + Fernet; key in DPAPI on Windows, Keychain on a Mac

Thanks and sources

The knowledge base is derived from Anthropic's claude-for-legal package (Apache 2.0). Knowledge of the Türkiye endpoints came from saidsurucu's yargi-mcp and mevzuat-mcp projects; every adapter was rewritten and tested live. Data comes from official and open sources: Bedesten, AYM, Resmî Gazete, regulators, TKGM, e-qanun.az, Rechtspraak, Sejm, RIS, Finlex, BOE, legislation.gov.uk, CELLAR, e-Gov, GLEIF, NeuRIS, ResourceContracts.

08 · UYAP

UYAP Dashboard

For lawyers to follow their own files in their own UYAP session: morning scan, new service notices and hearings, last-day tracking and calendar. It is a local screen independent of Claude; the same bridge also appears in Claude Desktop and on the desk's UYAP screen.

STATUS
COMES WITH SETUP

On Windows it comes by itself if you tick **ArthurMask** together with the **Law Firm** or **Corporate** package in setup; there is no configuration or calibration. One icon is added to the desktop: "ArthurLegal - UYAP Dashboard". It is not in the Mac setup. The safeguards below are built into the code and can only be tightened.

The road from UYAP to Claude: six gates

UYAP Avukat Portal → 1 Own session (e-signature or e-Devlet) → 2 List you opened (no extra requests) → 3 Limited (2 s apart, 200 a day) → 4 Read-only (no writing to UYAP) → 5 Mask (names, case no.) → 6 Exit gate (second scan) → Claude (labelled only)

Read-only
Nothing is written to UYAP: there is no tool to file a petition, open a case or pay a fee. A draft is written only to the computer; the lawyer signs in the portal with their own e-signature.

The lawyer's own session
Sign-in takes place at **avukat.uyap.gov.tr**, with the lawyer's e-signature or e-Devlet, in a separate browser profile. The bridge does not sign in and does not read the session cookie.

No extra requests to UYAP
The Dashboard reads, from inside the tab, the list UYAP has already sent to your screen. At least 2 s between requests, at most 200 a day, 40 requests and 3 minutes per scan; it pauses 10 minutes under load and stops for the day if access is refused. There are no automatic retries.

Masking cannot be skipped
Nothing from UYAP, party names and case numbers included, reaches Claude without passing through ArthurMask; that is why the Dashboard comes with ArthurMask.

A document is not an instruction
Instructions hidden in the other side's petition count as data and are not followed. Documents are handed to the model inside a frame they cannot break out of.

The model cannot approve itself
Writing a draft to disk or giving a red-line document to Claude needs approval in a separate window on the lawyer's screen: the default is "No", with a single-use code.

An unread list is not counted as "none"
Screens are recognised by their field names; a list that is not certain is not used. For a list not yet seen, the screen to open is named and **Tekrar dene** (try again) appears; a list that cannot be refreshed comes with the time it was last seen.

Real values only on the screen
The real list opens only in the Dashboard window; it cannot be copied and is hidden after 10 minutes without use. Every action is written to a chained audit log.

Last day: double entry

1 · Lawyer enters the last day without seeing the system's result → **2 · System** calculates separately, with its own rules → **Match** added to calendar / **Mismatch** warning shown → **3 · Second lawyer** blind count first, then a decision

- You enter the last day **first**; the system warns only on a mismatch. Until it is resolved, the **earlier day** applies.
- No date goes to the model; only whether the two matched or not.
- One-click calendar entry: reminders at 09:00, 3 days and 1 day before; the file is created only on the lawyer's computer.

1 · Double-click the icon
The Dashboard opens Avukat Portal (avukat.uyap.gov.tr) in a browser with a separate profile for UYAP.

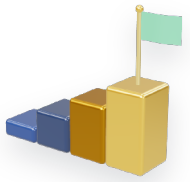

2 · Sign in yourself
Sign in as usual with e-signature or e-Devlet. Password and session cookie never enter ArthurLegal.

3 · Open the lists, press Tara (scan)
In UYAP open Tebligatlar (notices) and Duruşmalarım (hearings); the Bugün (today) list is masked and written to the encrypted archive on this computer.

09 · ROAD

What we have done so far

Since the first release: **358 commits** and **38 releases** in three open repositories. Each release's notes are on its GitHub release page.

START

First release: the Corporate Assistant and Law Firm packages, adapted from claude-for-legal to Turkish law.

PACKAGES

Contract drafting, petitions, expert reports and opinions, competition law. **Courthouse**: the first package for judges and clerks.

SOURCES

The **Academician** package, the non-commercial use licence. First source layer: Azerbaijani legislation, doctrine, contract precedents.

EXPANSION

German law; jurisdictions 14 → 22 → **28**. Source audit: every source tested with a real query, 7 broken sources fixed.

CONNECTOR

One research connector, Türkiye included. **ArthurMask.** Article verification gate: 301 citations corrected. Single-file setup, live land registry, the UYARI line.

DESK

Module screen, **macOS**. Case citation gate, Memory. **ArthurLegal Masası**, **UYAP Dashboard**, new icon.

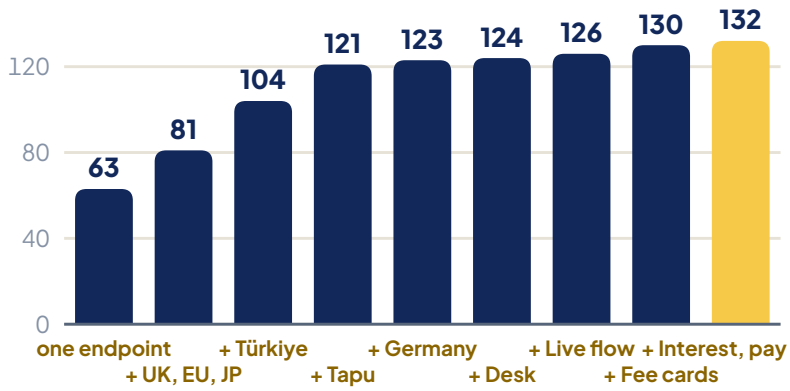

FEES, LANGUAGES

Fee cards: attorney fee, court fees, advance on costs, interest, severance and notice pay. **Three languages:** setup, desk, guide. Model advice on the desk.

TODAY

Number of tools on the single research connector

From the first connector to today

28
jurisdiction guides

4 + 3
packages and tools, in one setup

3
languages: Turkish, Azerbaijani, English

Frequently asked questions

Is it paid?
Free and open source. Lawyer and law-firm work (client work included), use by in-house lawyers and personal use are not considered commercial. A Claude account is needed separately.

Setup showed a warning; is it safe?
Windows and macOS warn about new programs without a code signature; that does not mean the file is harmful. Download only from the official GitHub page.

The tools do not show up.
Quit Claude Desktop completely, including the system-tray icon, and reopen it (Mac: Cmd+Q). Settings → Developer should show arthurlegal-yerel running.

Does it work in the browser or on the phone?
Once the research connector is added to claude.ai (p. 8), the desk and cards open there too. ArthurMask, Memory and local tools work only in Claude Desktop.

The desk did not open.
Quit Claude Desktop completely, reopen it and click the icon again. If setup used the classic interface, the desk is off; run setup again and choose the new one.

Which Claude plan do I need?
Claude Desktop and a Claude account; the desk runs on your own plan, no API key. Usage limits depend on your plan. Installing the packages by hand in Claude.ai Projects needs Pro or Team.

Where do my documents go?
Nowhere without being masked. Claude sees only the labelled text; real values stay in the encrypted vault on your computer.

The assistant answered without loading the instructions.
From the + button next to the message box, under arthurlegal-yerel, choose your package's prompt: hukuk-burosu, kurumsal, adliye or akademisyen.

How do I get updates?
Automatically, in the background. By hand: Start → ArthurLegal - Check for Updates; on a Mac, Applications → ArthurLegal.

How do I get the UYAP Dashboard?
On Windows, tick ArthurMask with Law Firm or Corporate in setup; its desktop icon appears. Not available on a Mac. Details on page 9.
